1:- Bar Plot – Top 5 Locations with Highest Mobile Sales

This bar plot illustrates the top 5 locations where the highest number of mobile phones were sold.

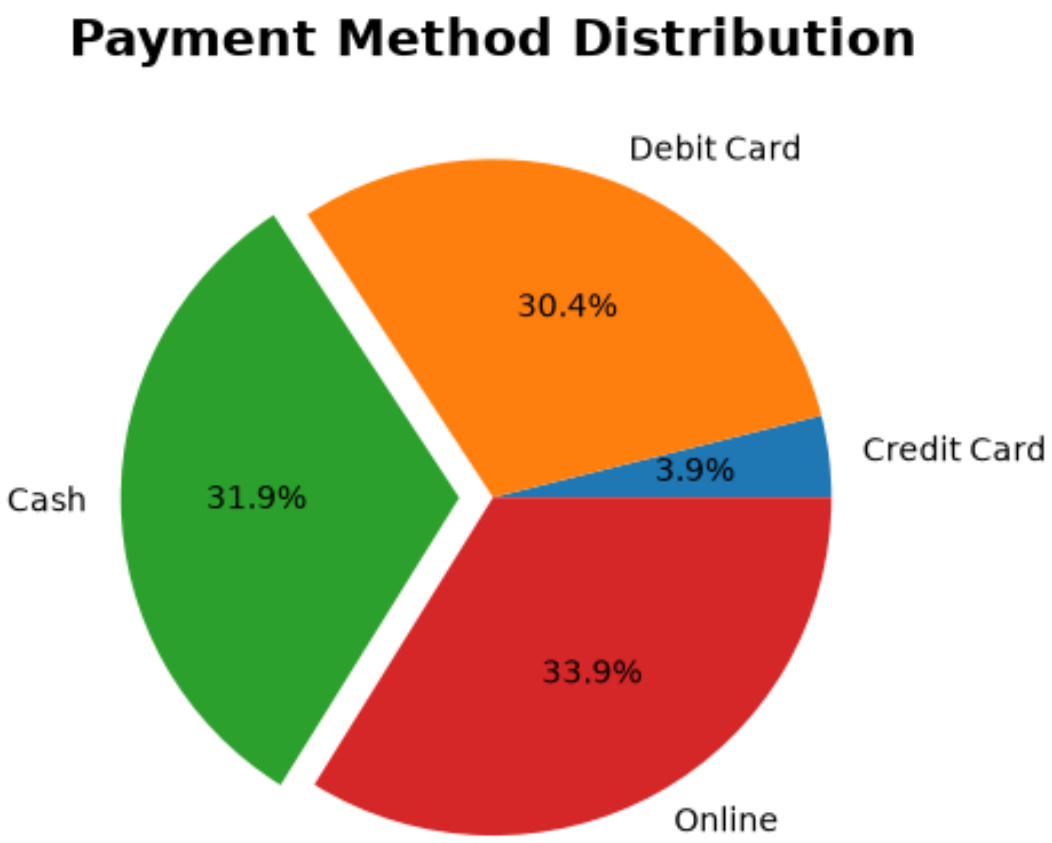

The graph compares the total number of mobile phones sold across these five locations.

Higher bars represent a higher number of mobile phones sold, making it easy to compare the locations.

Conclusion:

The chart helps identify the locations with the highest mobile phone sales and provides a clear comparison of sales across different locations.

2:- Pie Chart – Payment Method Distribution

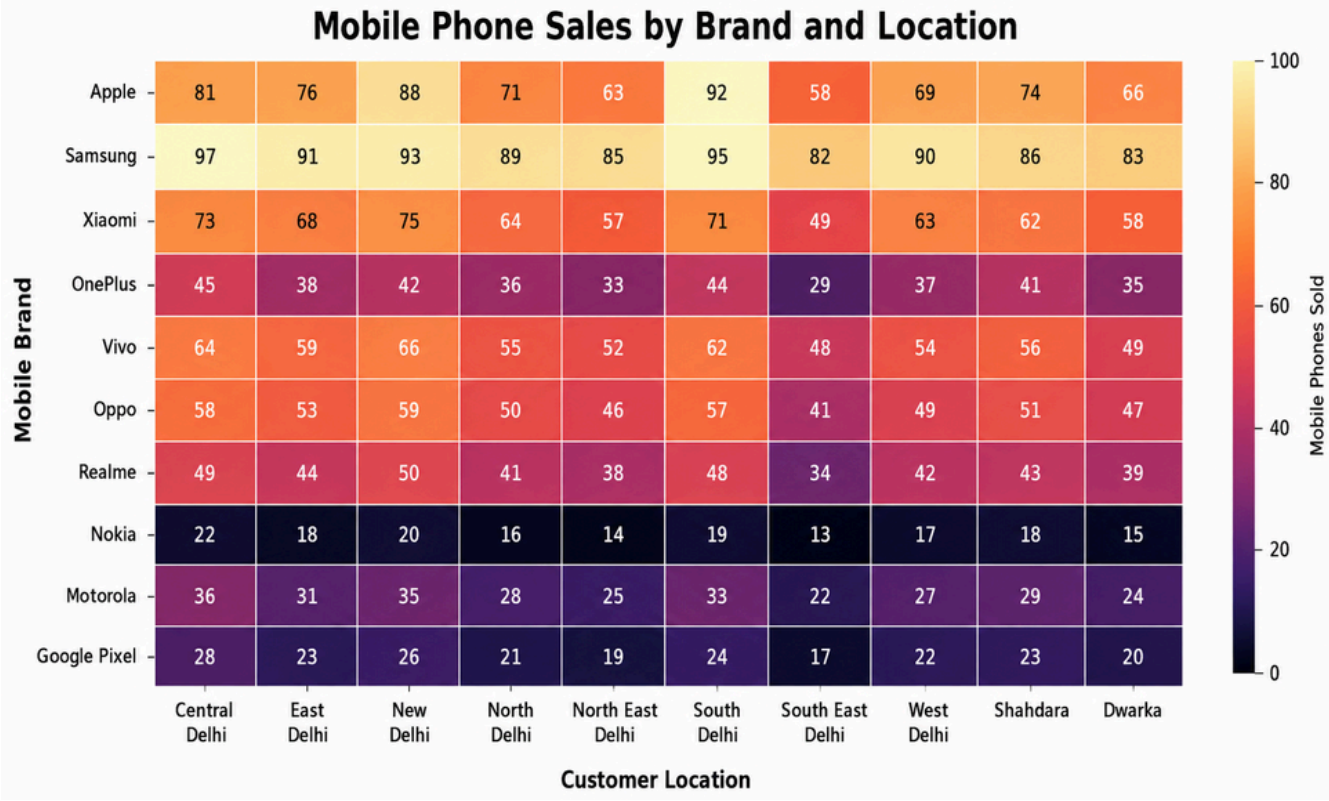

This pie chart illustrates the distribution of different payment methods used by customers.

Online payment is the most commonly used payment method with 33.9%, followed by Cash at 31.9% and Debit Card at 30.4%. Credit Card is the least used payment method with only 3.9%.

Conclusion:

The chart shows that Online payment is the most preferred payment method, while Credit Card is the least preferred among customers.

3:- Heatmap – Mobile Phone Sales By Brand And Location

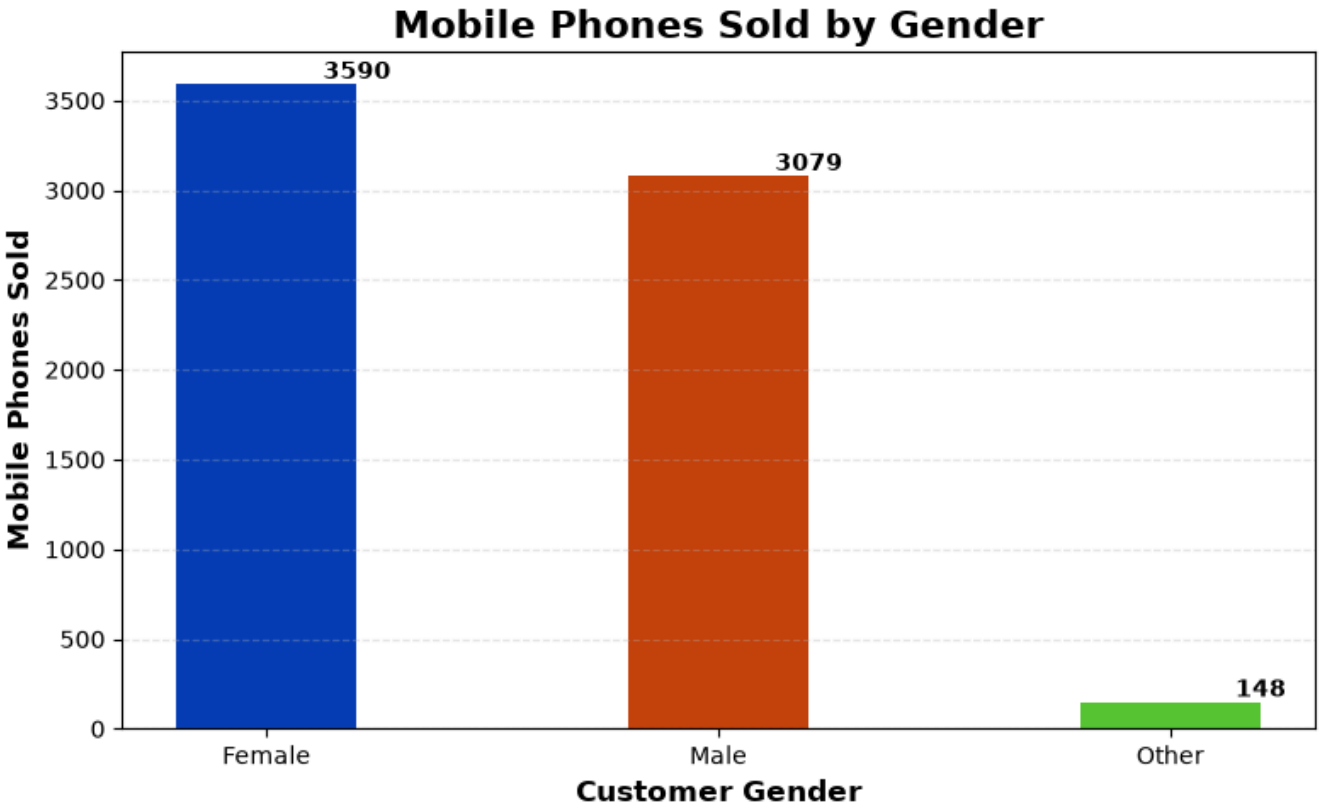

This heatmap illustrates mobile phone sales across different brands and customer locations.

Samsung shows the highest sales across most locations, while Nokia and Google Pixel have comparatively lower sales. The heatmap makes it easy to identify which brands perform better in different locations.

Conclusion:

The chart shows that Samsung is the best-performing brand overall, while Nokia has the lowest sales among the brands shown. It also helps identify the locations where each brand performs better.

4:-Bar Plot – Mobile Phones Sold by Gender

This bar plot compares the total number of mobile phones sold to customers of different genders. The tallest bar represents the gender with the highest number of phones purchased, while the shortest bar represents the lowest.

Conclusion:

Female customers purchased the highest number of mobile phones, followed by Male customers. Other customers accounted for the lowest number of phones sold.
